

3. Write a pseudocode, flowchart and a computer program

that reads a month number and print month name based on the following table.

(refer to page 30 in "50 programming Challenges....")

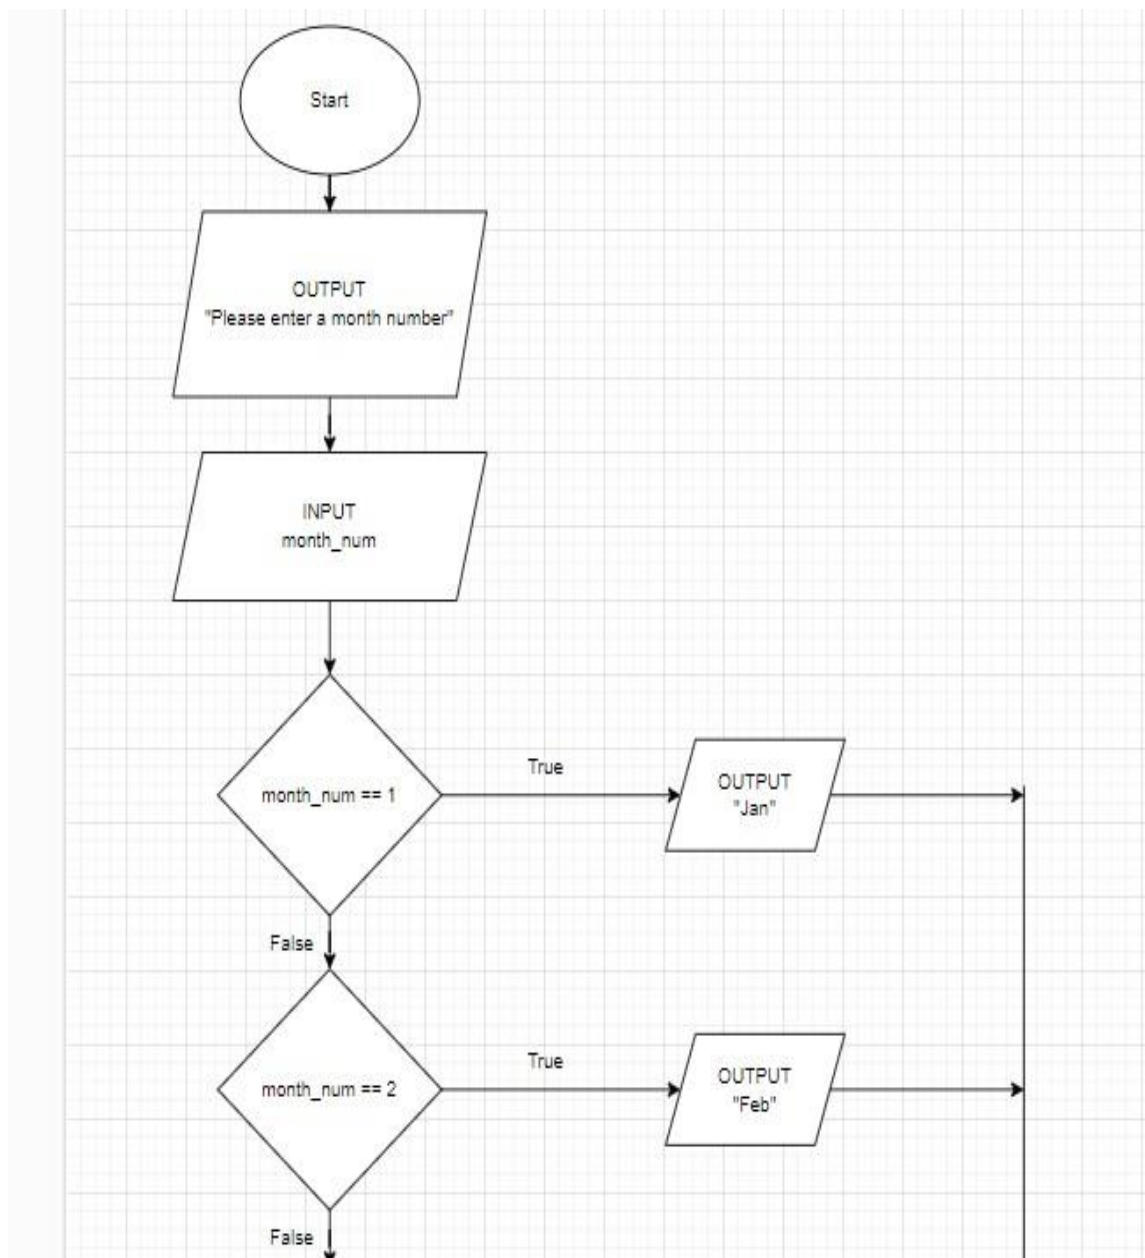

Month Number	Month Name
1	Jan
2	Feb
3	Mar
4	Apr
5	May
6	Jun
7	Jul
8	Aug
9	Sep
10	Oct
11	Nov
12	Dec

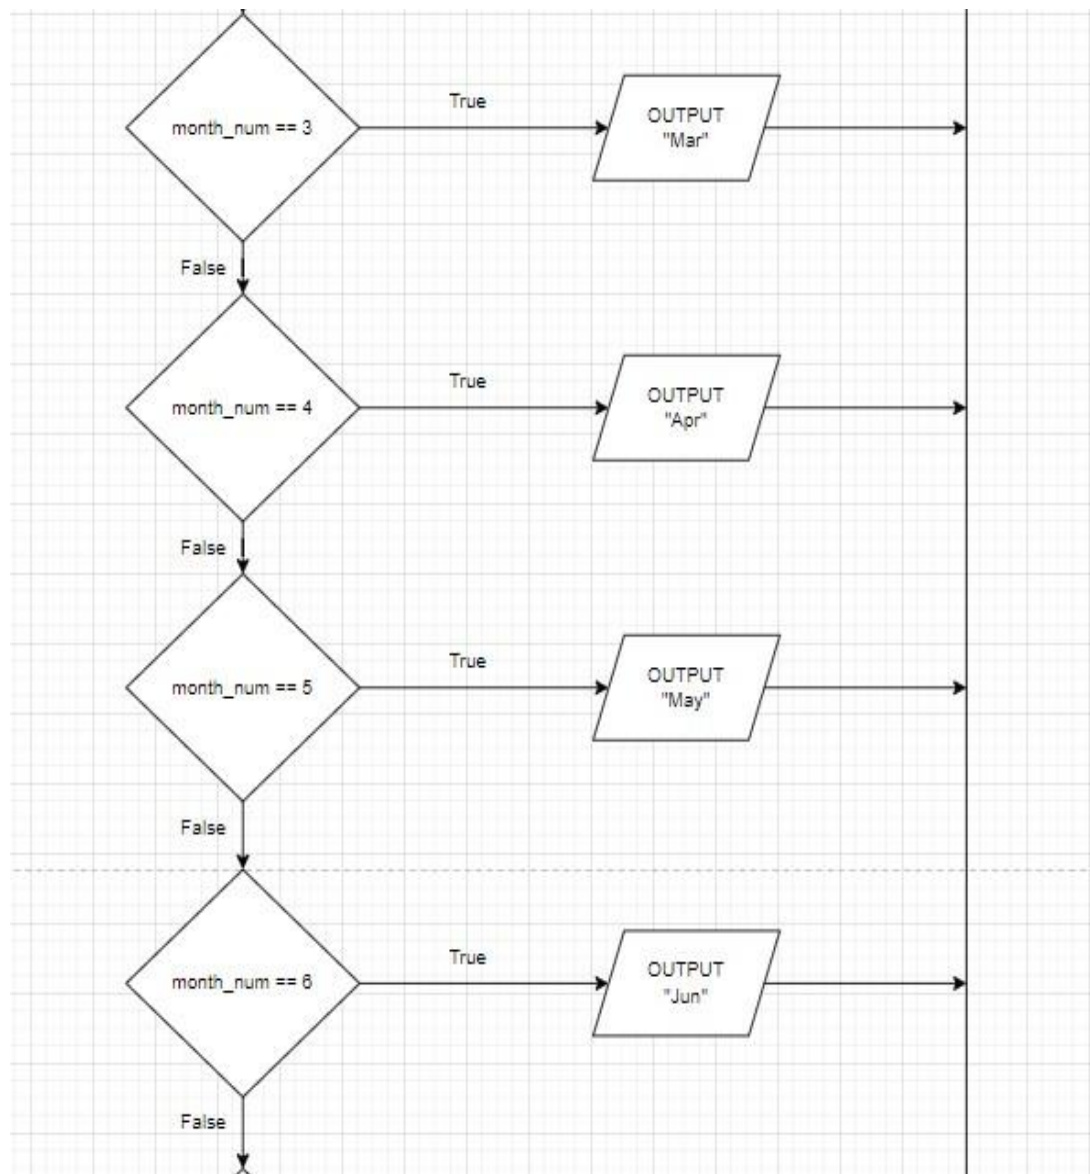

Pseudocode

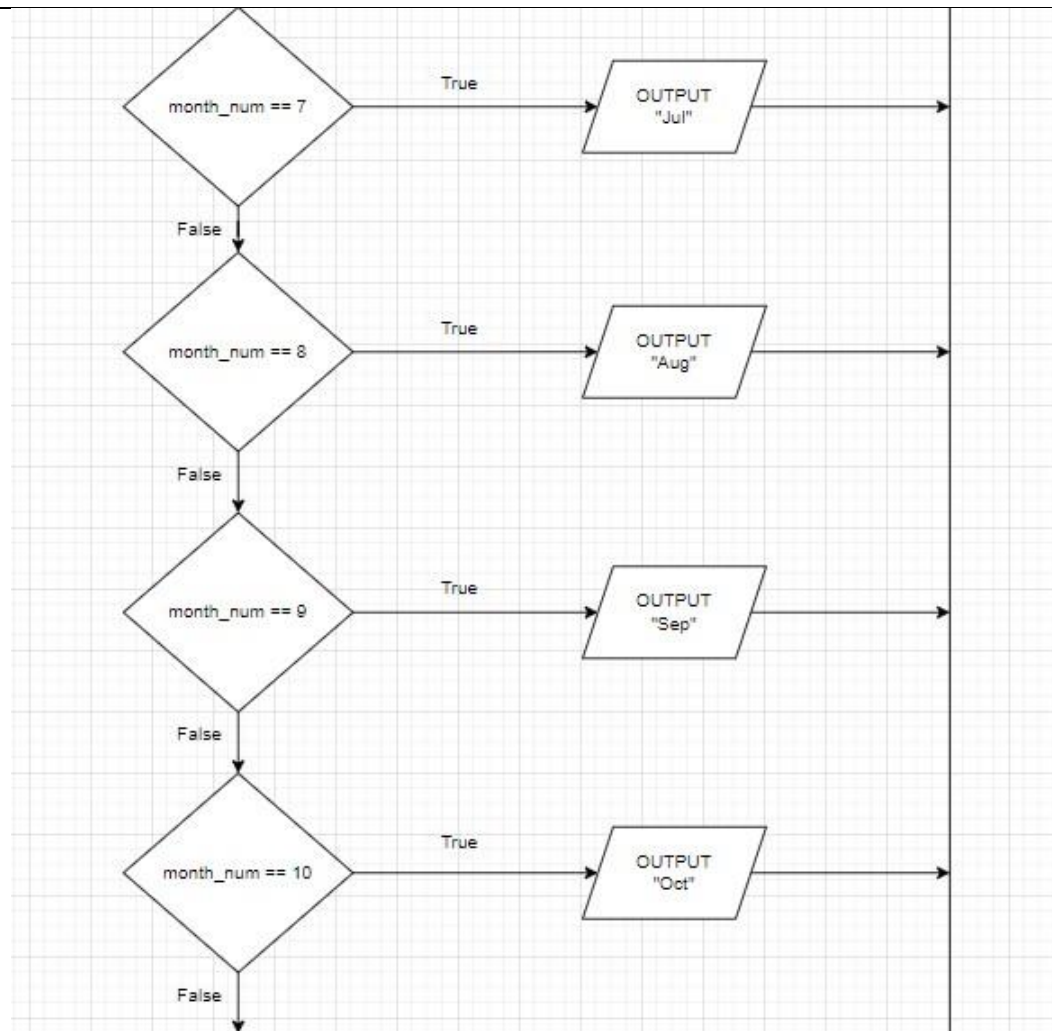

1. Input an integer (month_num)
2. if month_num is 1 then output "Jan"
- else if month_num is 2 then output "Feb"
- else if month_num is 3 then output "Mar"
- else if month_num is 4 then output "Apr"
- else if month_num is 5 then output "May"
- else if month_num is 6 then output "Jun"
- else if month_num is 7 then output "Jul"
- else if month_num is 8 then output "Aug"
- else if month_num is 9 then output "Sep"
- else if month_num is 10 then output "Oct"
- else if month_num is 11 then output "Nov"
- else if month_num is 12 then output "Dec"

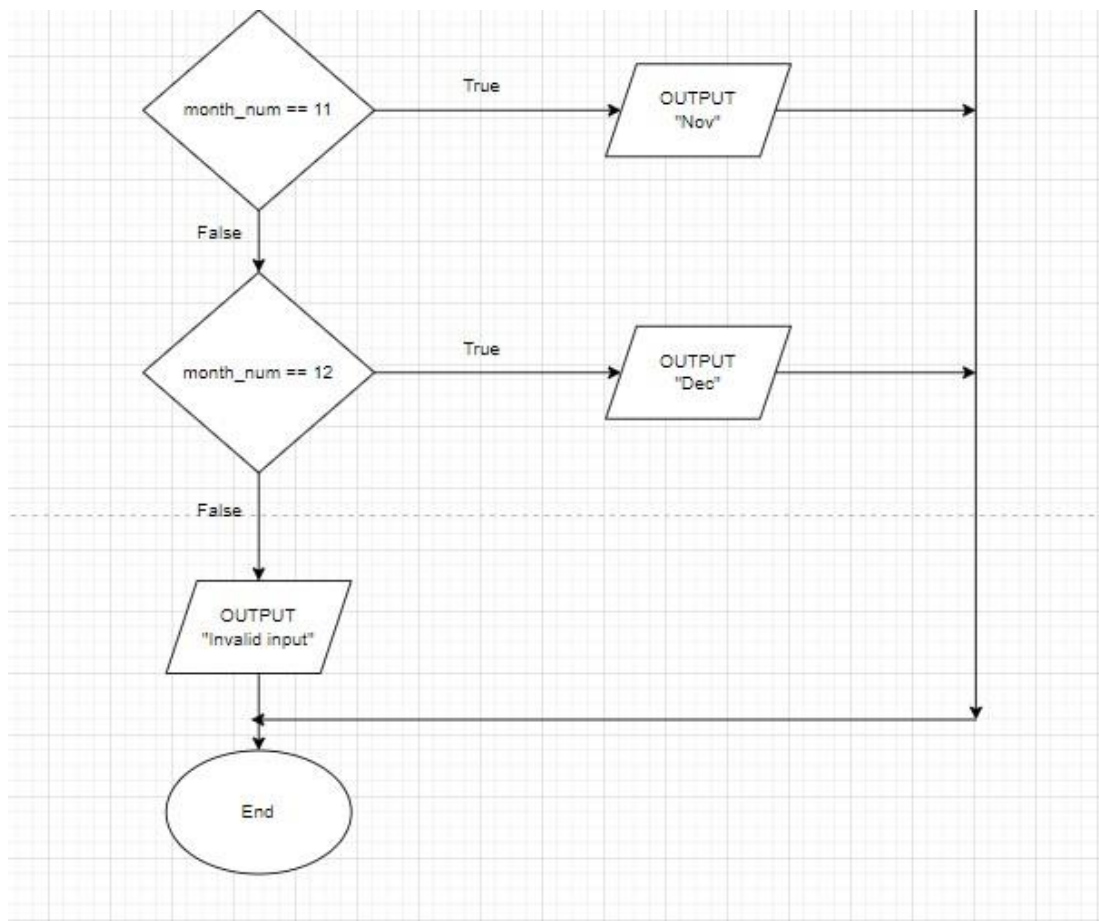

else output "Invalid input"

Flowchart

C++ program

```
#include <iostream>

using namespace std;

int main()
{
    int month_num;

    cout<<"Please enter a month number: ";
    cin>>month_num;

    if(month_num == 1)
    {
        cout<<"\nJan";
    }
    else if(month_num == 2)
    {
        cout<<"\nFeb";
    }
    else if(month_num == 3)
    {
        cout<<"\nMar";
    }
    else if(month_num == 4)
    {
        cout<<"\nApr";
    }
    else if(month_num == 5)
    {
        cout<<"\nMay";
    }
    else if(month_num == 6)
    {
        cout<<"\nJun";
    }
    else if(month_num == 7)
    {
        cout<<"\nJul";
    }
    else if(month_num == 8)
    {
        cout<<"\nAug";
    }
    else if(month_num == 9)
    {
        cout<<"\nSep";
    }
}
```

```
else if(month_num == 10)
{
    cout<<"\nOct";
}
else if(month_num == 11)
{
    cout<<"\nNov";
}
else if(month_num == 12)
{
    cout<<"\nDec";
}
else
{
    cout<<"\nInvalid input";
}

return 0;
}
```
